PRASHANT SHAH

551-217-9864 | shahp0021@gmail.com | prashantshah.tech | linkedin.com/in/prashant210 | github.com/Prashant002-1

Full-stack software engineer and solo founder who takes products from design through frontend and backend development, cloud infrastructure, data systems, and production operations. Owns Atlas LMS end to end and previously delivered enterprise software at Trimble and Novartis alongside award-winning AI research. Explore more full-stack, data, and AI work at prashantshah.tech.

Experience

Founder & Engineer **May 2026 - Present**
Atlas LMS *Remote*

- Founded and operate Atlas LMS, a live multi-tenant AI product; secured AWS startup credits and brought in early test users with product interest.
- Lead product strategy, go-to-market, UX/design, frontend and backend engineering as the solo founder, turning tester feedback into shipped product changes.
- Built a TypeScript/Next.js/PostgreSQL agent harness where persistent sessions, typed tools, retrieval, multi-provider model routing, inter-agent communication, and plugin/skill capabilities coordinate against one durable course record and shared product context.
- Own the AWS production stack through infrastructure as code, CI/CD, monitoring bots, deployment verification, rollback, and recovery, maintaining operational control while shipping the product alone.

Software Engineering Intern **May 2025 - Aug 2025**
Trimble Inc. *Princeton, NJ*

- Delivered a C#/.NET internal tool across TMW Suite, environment databases, REST APIs, and authentication boundaries, consolidating AI-assistant configuration and payload routing into one editable workflow.
- Used SQL, S3/RDS/CloudWatch, Datadog traces, and API payloads to debug cross-service defects; shipped pull-request and design-document validation that caught stale configuration before propagation.

Data Engineer, Data & Workflow Systems **Sep 2025 - Jun 2026**
Ramapo DMC - Center for Food Action *Mahwah, NJ*

- Turned inconsistent donation intake into a Python/PostgreSQL data platform for barcode capture, price pipelines, inventory records, analytics, reporting, and PantrySoft export, giving pantry staff one operational record.
- Built browser automation plus Playwright, pytest, and API integration tests for a third-party system without a usable API; modeled receive, mapping, block, and reconciliation states so invalid records stopped before export.

Software Engineering Intern, Business Analytics **Jun 2024 - Aug 2024**
Novartis Pharmaceuticals Corporation *East Hanover, NJ*

- Built PostgreSQL and Azure Functions services behind clinical operations and resource-management applications spanning 100+ initiatives, consolidating project, budget, and allocation data for governed reporting.
- Delivered React, Power BI, and Tableau workflows with processing and quality checks that reduced recurring operational reporting from two days to hours.

Undergraduate Researcher, Retrieval & AI Systems **May 2025 - May 2026**
Ramapo College of New Jersey *Mahwah, NJ*

- Built and evaluated an end-to-end Vertex AI pipeline over MovieLens 25M data and 1,600 controlled queries; ablations diagnosed behavior under content-intent conflict, earning Best Research Award and NGEN AI 2026 acceptance for Springer proceedings.

Education

Ramapo College of New Jersey **Mahwah, NJ**
B.S. Data Science & Computer Science (Double Major) | Minor: Math | GPA: 3.8/4.0 May 2026
Recognitions: Best Research Award, ICPC NY Honorable Mention, Presidential Scholarship

Skills

Programming: Python, TypeScript, JavaScript, Java, C#, C++, SQL, Bash
Cloud & DevOps: AWS, GCP, Azure, Docker, Infrastructure as Code, Terraform, Ansible, CI/CD
AI: Cloud Data Warehouses, Streaming Systems, AI-Accelerated Pipelines, AI/ML, GenAI, Intelligent Systems
Quality: Unit Testing, Integration Testing, Test Planning, Test Automation, Debugging, Defect Management
