

PRASHANT SHAH

551-217-9864 | shahp0021@gmail.com | prashantshah.tech | linkedin.com/in/prashant210 | github.com/Prashant002-1

I have launched a product as a solo developer, rebuilt inventory workflows alongside food-pantry operations, and delivered production software at Trimble and Novartis. The projects at prashantshah.tech show the full-stack, data, and product work I do outside those roles. I am interested in product engineering, data systems, and AI.

EXPERIENCE

Founder & Engineer

May 2026 - Present

Atlas LMS 

Remote

- Defined Atlas around a concrete problem: students already use AI outside teacher visibility. Built a teacher-governed LMS where agents work from course records, student history, and explicit course policies.
- Designed and implemented the multi-tenant product in TypeScript and PostgreSQL, with typed agent tools, durable sessions, evidence verification, and review gates for consequential changes.
- Shipped the live product and operate its cloud infrastructure end to end: containerized compute, private managed PostgreSQL, TLS, secret management, monitoring, deployment, rollback, and recovery.

Data Engineer, Data & Workflow Systems

Sep 2025 - Jun 2026

Center for Food Action -- Ramapo DMC

Mahwah, NJ

- Turned inconsistent donation intake into one operational system for barcode capture, item and price lookup, donor and inventory records, staff review, reporting, and PantrySoft export.
- Designed PostgreSQL records and review, block, and reconciliation states so staff could catch missing mappings and quantities before export.
- Built safe Playwright and API tests for PantrySoft, a third-party system without a usable API; validated blocked-write previews, traces, and reconciliation before live runs.

Software Engineering Intern

May 2025 - Aug 2025

Trimble Inc.

Princeton, NJ

- Built a C#/.NET manager across TMW Suite, environment databases, internal APIs, and authentication boundaries, making distributed service configuration visible and editable in one workflow.
- Added SQL validation and CloudWatch/Datadog tracing to surface stale or conflicting service data before downstream workflows, reducing manual troubleshooting across production and development environments.

Software Engineering Intern, Business Analytics

Jun 2024 - Aug 2024

Novartis Pharmaceuticals Corporation

East Hanover, NJ

- Built PostgreSQL and Azure Functions services behind business-intelligence and resource-management applications used across 100+ clinical initiatives.
- Built React, Power BI, and Tableau workflows over project, budget, approval, and staffing data, adding processing and quality checks that reduced recurring status reporting from two days to hours.

Undergraduate Researcher, Retrieval & AI Systems

May 2025 - May 2026

Ramapo College of New Jersey

Mahwah, NJ

- Built an end-to-end retrieval pipeline over MovieLens 25M graph data, joining data construction, embeddings, graph models, and cloud experiments in one reproducible system.
- Evaluated 1,600 controlled queries across semantic, vector, graph, and affective variants; used ablations and paired effect sizes to diagnose behavior when content and intent conflicted.
- Paper accepted at NGEN AI 2026; to be published in Springer conference proceedings.

EDUCATION

Ramapo College of New Jersey

Mahwah, NJ

B.S. Data Science & Computer Science (Double Major) | Minor: Math | GPA: 3.8/4.0

May 2026

Recognitions: Best Research Award, ICPC NY Honorable Mention, Presidential Scholarship

SKILLS

Languages: Python, C++, C#, Java, TypeScript, JavaScript, SQL, R, SAS, Bash

Apps & Data: Next.js, React, Node.js/Express, .NET, Flask/FastAPI, REST APIs, PostgreSQL, MySQL, SQLite, Drizzle

AI & Analytics: Vercel AI SDK, Agent Architectures, RAG, Graph Retrieval, Pandas, scikit-learn, Power BI, Tableau

Cloud & Quality: AWS, GCP, Azure, Docker, Linux, GitHub Actions, Playwright, Selenium, pytest, Datadog
